

.50 BROWNING MACHINE GUN CARTRIDGES

Australia has manufactured .50 calibre ammunition for weapons supplied with our overseas purchases and some of the Naval vessels that carry .50 BMG armament. Australia commenced making these cartridges in 1986 and is currently still producing them. We apparently make only ball cartridges. The metric designation for this cartridge is 12.7x99 but it is more commonly referred to as the .50 cal.

.50 Ball cartridges manufactured just prior to the closure of Factory No. 2 for the last time.

The beginning of the brave new world. Make a profit or get wound up.
