

## "L" TYPE ANTI-TANK HAND GRENADE

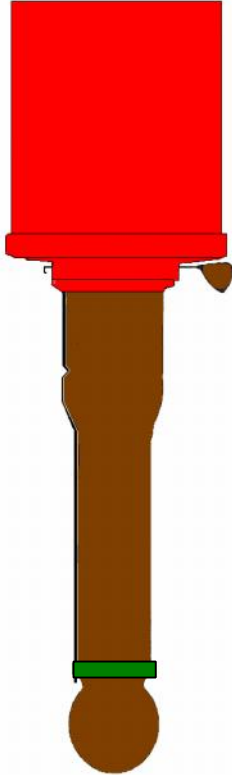

This grenade is another fairly innocuous type providing only blast, very little fragmentation and no hollow charge effects at all. It would seem to be a dangerous grenade to attack a tank with. The fuze system would appear to be the standard OTO all-ways acting type.

2kg. in weight.

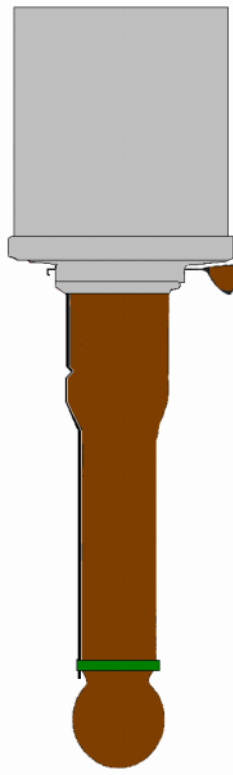

Markings for the Practice grenade with smoke filler.

Markings for the HE grenade

Alternative markings for the drill grenades
