

## GRENADE BREDA MODEL 40 & 42

These two grenades are actually the Breda model 35 with a wooden handle attached to give the model 40 and a spherical charge added to give the model 42. Apart from the obvious wooden handle and sphere the only real differences between the model 35 are that the Mod 40 & 42 have a longer safety cap and it is spring loaded so that on release, some assistance is given to the handle to fly off. In all other respects they are a model 35.
