

AUSTRIAN 8X50R MANNLICHER

Georg Roth Ammunition Company and the Vienna Armoury developed this cartridge in 1888 for use in the straight pull Mannlicher M88 rifle.

The original cartridge was loaded with gunpowder but this was soon changed to smokeless powder in 1890, which changed the model number to M1888/90. Weakness in the case design forced a change to the strength and the model number then became M1893.

8mm incendiary.

8x50R Military service cartridges.
