

8LB. FRAGMENTATION BOMB Mk. I & II.

This bomb was fitted with either tail fuze No. 880 or 881.

The steel body was filled with either:

- .79kg of TNT or RDX/TNT 60/40 or
- .68kg of Amatol 50/50 or 60/40.

When explosives other than TNT were used a topping of TNT was added to boost initiation.

The difference between the Mk I and II was that the Mk I had a smaller filling hole but it was never filled or adopted into service.
